                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gene Index
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prepared, and so circles were made in vitro: Following Hab purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 132376-1323911, 1456007-1456775, and IS00552-1502855). Subtraction by Bento Soares and M.

The library was constructed according to Bonaldo, Leannon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime sequence that is located between the Not I site and the [dT]18 tail. The sequence tag for this library is

/note="Torgan: Chondrosarcoma, Vector: pT7T3-Pac
(Pharmacia) with a modified polylinker; Site 1: BcoR I;
Site 2: Not I; NCI CGAP FH1 is a normalized cDNA library
obtained from a cell line derived from grade I
chondrosarcoma tissue. The library was constructed and
normalized according to Bonaldo, Lennon and Soares, Genome
Research, 6:791-806, 1996. First strand cDNA synthesis was
primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EcoR I adaptor,
digested with Not I, and cloned directionally into
pT7T3-Pac vector. The oligonucleotide used to prime the
synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
AGAATCCGGC. The cell line was provided by Dr. James Martin
from the University of Iowa.

                                                                                                                                                                                                                                                                                                                                                                             Clone distribution: MGC clone distribution information can be found through the I.M.A.G.B. Consortium/LLML at: http://image.llnl.gov Series; IRAL Plate: 44 Row: e Column: 10

This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 23957699

This clone has the following problem: retained intron.

plasmid DNA from the normalized library NCI_CGAP_Kid3 was
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(cloneIDs 1322376-1323911, 1456007-1456775, and
1500552-1502855). Subtraction by Bento Soares and M.
Fatima Bonaldo. "

cc absent or decreased levels of polypeptides e.g. insulin, to supplement or decreased levels of different polypeptides, e.g. haemoglobin S con for haemoglobin B, superoxidase (SDD), catalase, DNA repair protein, to con inhibit the activity of a polypeptide e.g. an oncogene or tumour controlled the activity of a polypeptide e.g. an oncogene or tumour controlled the activity of membrane bound receptor by competing controlled the activity of membrane bound receptor by competing controlled in reducing inflammation, or to bring about a desired cresponse e.g. blood vessel growth inhibition, enhancement of immune controlled the response to proliferative cells or tissues. The protein and the nucleic continuous system involving abnormal growth of specific types of cells as of other cell types where expression has been observed. The protein, the nucleic acid and antibodies are useful for treating, preventing, detecting, diagnosing disorders (contains system, hyperproliferative disorders including meoplasms, contained arterio-arterial fistula as peripheral artery disease, limb cardinal cell proliferation, neurological diseases (such as Alzheimer's disease, parkinson's disease, Huntington's diseases (such as Alzheimer's etc), infectious diseases caused by virus, bacteria, fungi, etc. The contains accorded to the contains and contains and contains and contains and contains accorded to the contains and contains a contains and contains an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnosing pathological condition or a susceptibility to pathological condition in a subject. The protein is useful as reagents for differential identification of the tissues or cell types present in a biological sample. The protein can be administered to patients having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel human secreted proteins. The protein i useful for preventing, treating or ameliorating a medical condition protein is useful for diagnosing a pathological condition or susceptibility to a pathological condition in a subject. The protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human secreted proteins useful for treating and/or diagnosing disorders of immune system, cardiovascular disorders such as peripheral artery disease, neurological diseases such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-AUG-1997;

                                                                            밁
                                                                                                                                                                                                                                                                                                                                               The invention relates to novel human genes (ABZ66891-ABZ68209) and the CC encoded secreted proteins (ABP99470-ABP99872) useful for preventing, CC treating or ameliorating medical conditions e.g. by protein or gene CC therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and CC (antlagonists are useful in the diagnosis, treatment and prevention of: CC (a) cancer, e.g. breast and ovarian cancer and other cancers of the CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, CC lung or urogenital; (b) immune disorders e.g. Addison's disease, CC allergies, autoimmune haenolytic anaemia, autoimmune thyroiditis, CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, cc bacterial, fungal and parasitic infectious diseases such as viral,

The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing or treating cancers or other hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune disorders, inflammatory disorders, diseases involving angiogenesis, AIDS (acquired immunodeficiency syndrome) hepatitis, anaemia, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome mapping, in gene therapy, for identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein genomic fragment referred to in the disclosure of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein genes, and ABP00947-ABP01363 represent the proteins they encode. ABZ73598-ABZ74687 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human secreted proteins and nucleic acids, useful for detecting or treating cancer or other hyperproliferative disorders, autoimmune disorders, inflammatory disorders, HIV disease, hepatitis or anemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 2331-2345; 2474pp; English

                                                                                  Matches
                                                                                                                                                                         The invention relates to a novel polynucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polynucleotide sequences shown in ADCB5548-ADCB7616 encode GPCR's of the

The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be asset for gene therapy. The reagent of the invention and any proteins and antibodies derived from it, are used (i) for analysing tissue and blood samples for medical diagnosis; (ii) for diagnosis and characterisation of chronic joint diseases, on the basis of molecular characterisation, and determining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for developing treatments for inflammatory diseases, particularly of joints, infections and tumours. ACA64801-ACA64965 represent human polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; chronic inflammatory joint disease; infection; tumour; antiinflammatory; cytostatic; antiarthritic; antirheumatic; immunosuppressive; gene therapy; etiological pathogenicity; ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACA64895 standard; DNA; 134292 BP

The DNA was isolated from a human genomic library by screening with LBP-3 cDNA (see ALBA26501). The open reading frame spans 10 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.

AB007223.

pathway in Drosophila. Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53

Example 2; Page 320-351; 678pp; English.

Commodulating agent, by contacting an assay system comprising a purified HM compacting on mucleic acid with a test agent under conditions, where but the presence of the test agent, the system provides a reference condition, where but contacting a cell defective in p53 pathway in contacting a cell defective in p53 pathway of a cell (comprising contacting a cell defective in p53 pathway contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p53 function with a candidate modulator contacting an endulator that specifically binds to a HM polypeptide comprising an HM amino acid comprising contacting the cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide comparising an HM amino acid compression; (c) comparising contacting the cell with an agent that compression; (c) comparising the results with a control; and diagnosing (M4) contacting the sample with a probe for HM comparison indicates a likelihood disease). (M1) is useful contentifying modulators of the p53 pathway. A probe for HM expression contentifying modulators of the p53 pathway. A probe for HM expression contentifying modulators of the p53 pathway. A probe for HM expression contentifying modulators of the p53 pathway. A probe for HM expression contentifying modulators where disease or disorder prognosis is related to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful in a variety of diagnostic and contentified by (M1) are useful The invention relates to identifying (MI) a candidate p53 pathway nucleic acid encoding a p53 pathway modifying protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel human Ras-like protein comprising a fully defined sequence of 615 amino acids, given in the specification, its allelic variant, orthologue or its fragment comprising at least 10 contiguous amino acids. The new human Ras-like proteins and the polypeptides encoding them are useful in the diagnosis, prevention, and treatment of inflammation and disorders associated with cell and the polypeptides encoding them are useful in the diagnosis, prevention, and treatment of inflammation and disorders associated with cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           neurodegenerative diseases, ischemic injurviral infections, cancer and osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Ras-like protein polypeptides, useful for treating AIDS, neurodegenerative diseases, ischemic injuries, toxin-induced diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-MAR-2001; 2001US-00805455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-MAR-2002; 2002WO-US007159.

                                               The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the efficacy progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (f) assessing the prostate cancer has metastasized in a patient; (h) determining whether prostate cancer has metastasized cancer in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABV12806 standard; cDNA; 407 BP
                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200160860-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human prostate expression marker cDNA 12797
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-SEP-2002

                                                                                             The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables I-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastabled in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient assessing the aggressiveness or indolence of prostate cancer in a patient.
